# To-Do List API Testing

## Postman Test Execution Summary

**Base URL:** https://jsonplaceholder.typicode.com **Collection:** To-Do List API Testing

| Total test cases | Passed | Failed | Reported passed assertions |
|---|---|---|---|
| 10 | 6 | 4 | 18 |

## Test Results

| ID | Scenario | Method | Expected result | Actual result (reported) | Status |
|---|---|---|---|---|---|
| TC01 | GET To-Do by ID | GET | 200; title string; id=1; completed Boolean | 200 OK; 4 assertions reported passed | Passed |
| TC02 | Create valid To-Do | POST | 201; title matches; userId=1; completed Boolean | 201 Created; 4 assertions reported passed | Passed |
| TC03 | Missing title | POST | 400 or 422 | 201 Created (reported) | Failed |
| TC04 | Invalid userId (-1) | POST | 400, 404 or 422 | 201 Created (reported) | Failed |
| TC05 | Missing userId | POST (intended) | 400 or 422 | 201 Created (reported) | Failed |
| TC06 | Invalid completed type | POST | 400 or 422 | 201 Created (reported) | Failed |
| TC07 | Required response fields | POST | userId, id, title, completed present | 4 assertions reported passed | Passed |
| TC08 | Response data types | POST | userId/id numbers; title string; completed Boolean | 4 assertions reported passed | Passed |
| TC09 | POST status code | POST | 201 Created | 201 Created; assertion reported passed | Passed |
| TC10 | Response time | POST | Below 3000 ms | Below 3000 ms; assertion reported passed | Passed |

## Observations and Recommendations

• TC03–TC06 reportedly returned 201 Created rather than the expected rejection status. JSONPlaceholder is a simulated API; this does not prove a production API defect.

• TC05 is configured as GET in the collection; change it to POST for the intended missing-userId test.

• TC06 uses the misspelled key 'completd'. Change it to 'completed' and use string value "false" to test type validation.

• TC01 request body uses 'tile' instead of 'title'; a GET request does not need a body.

• The JSON file is a collection export, not a saved run-results export. Results are based on previously reported outcomes; exact TC10 timing was not provided.

## Conclusion

This project demonstrates beginner API testing skills: GET/POST requests, status assertions, response field and data-type checks, negative testing, response-time validation, and documentation. Correct TC05 and TC06, then rerun the collection to confirm their results.

*Prepared from the uploaded collection and previously reported outcomes; not a raw Postman execution export.*
